

# Guided Trial of Sample Manager

Let us import your data for you - and answer any questions along the way.

Our 30 day Guided Trial is meant to get you evaluating Sample Manager faster and in a way that more accurately reflects the requirements of your lab.

With a Guided Trial, we'll set up your samples and data in Sample Manager. Then, we'll regularly check-in on your progress, and help provide what you need to conduct a thorough evaluation of Sample Manager.

- **See a better reflection of your lab conditions.**
- **Streamline your assessment of Sample Manager's fit.**
- **Receive 1:1 training sessions and direct help.**

## Guided Trial Timeline:

One Week Prior	Kick-Off Meeting	Mid-Trial Check In	Trial Review
Send us a portion of your data. We'll use this to prepare your trial for your specific situation.	Together, we'll review how your data has been imported, begin training and share our resources.	We'll answer any questions you have and begin preparing for next steps.	We'll answer questions, provide resources for next steps, and discuss preserving your trial for migration.

## Sample Manager Trial FAQ

### What can I put into a trial?

Labs get the best value of their trial when they add their real-world data into the trial. Important data for your lab might include collection dates, where the sample came from, sample types, sample IDs, storage locations, etc.

### How many samples can I enter in a trial?

As many as you want! The Guided Trial team helps you enter a portion of your samples to get started, but you are welcome (and encouraged) to add more on your own.

### How many data fields can I have?

Uniquely, LabKey does not limit the amount of data fields you have in Sample Manager.

### What data formats can I use for import?

Any structured or tabulated data, such as Excel, Google Sheets, or CSV files. This way your data can be easily formatted to import into Sample Manager. Please note, handwritten data will need to be processed into one of these formats in order to be used.

**Please Note:** We cannot accept any data during a trial that contains 'Personally Identifiable Information' or 'Protected Health Information,' data with which individuals can be identified.
